# Contents

**Introduction**  

1. *Mapping for business*  
   - Chapter 1: The feasibility of logging in the Pará Calha Norte region of the Brazilian Amazon  
   - Chapter 2: Imports and exports of roundwood in the upper midwestern United States  
   - Chapter 3: Modeling biomass transportation costs in North Karelia, Finland  
   - Chapter 4: Competition for sawlogs in the Northern Forest  
   - Chapter 5: Determining the stewardship potential of Indiana’s nonindustrial private forests  
   - Chapter 6: Public and private forest ownership in the conterminous United States  

2. *Mapping for inventory*  
   - Chapter 7: Analyzing urban forest characteristics in Florence, Alabama  
   - Chapter 8: GIS for Romanian forest management planning  
   - Chapter 9: Using a topographic index to define terrain types  
   - Chapter 10: Analyzing the forest structure in northern Cambodia  
   - Chapter 11: Using an integrated moisture index to assess forest composition and productivity  

3. *Mapping for operations*  
   - Chapter 12: Mapping land use at Swanton Pacific Ranch  
   - Chapter 13: Improving watershed health and air quality in Washington, D.C.  
   - Chapter 14: A wildfire risk management system for decision support  

4. *Mapping for sustainability*  
   - Chapter 15: Mapping southern pine beetle hazard in the Pisgah National Forest, North Carolina  
   - Chapter 16: Predicting land-cover change and forest risk in the Bolivian lowlands  
   - Chapter 17: Prioritizing restoration in fire-adapted forest systems  
   - Chapter 18: Protecting the drinking water supply in the northeastern United States  
   - Chapter 19: Improving sustainability planning in Brazilian eucalyptus forests
