

GIS Tutorial for Health, Third Edition

Exercise Errata

Tutorial 9, page 298 (Extract land use using mask): Steps 1-4 may produce errors. The parameters given in the screen capture on page 297 has the Extent set to "As Specified Below." However the actual extent values are not shown, and some users may have their extent values incorrectly set by default. To correct this error, set the Settings Extent to "Same as layer PghMask."

The screen capture as linked below, may be referenced instead of the one on Page 297, step 3.
