

## Address Data Model

### Data Model User Group

Join the [data model user group](#) if you are an existing ArcGIS customer and want to learn more about design and architecture of personal or enterprise Geodatabase and become a part of Esri's growing data model community.

The ArcGIS Address Model provides a data model to help users manage site addresses, road centerlines and mailing addresses using ArcGIS. The [ArcGIS for Local Government Resource Center](#) is the current location for maps, apps and best practices for organizations that are responsible for address information.

With the launch of the address maps and apps, the ArcGIS Address Data Model was updated and is included the Local Government Information Model you can download and use on your project. We will continue to add content to the ArcGIS for Local Government solution and encourage you to participate in this community.

The data model experiences, examples and case studies that were used in the development of the early versions of the ArcGIS Address Data Model have been captured and incorporated in the maps and apps available on the Resource Center.

### Downloads - Case Studies

The Resource Center contains [maps and apps](#) that help with your implementation. If you would like to see prior implementation examples or documentation from past projects, please email the [ArcGIS for Local Government Team](#).

### User Forums

Visit the [Esri data model discussion forum](#) to share your ideas, thoughts, and questions with other users.
