

## Data Models Tips and Tricks

### Summary:

These tips and tricks are designed to help guide in the use of common data model methods and best practices.

### Description:

Click here for more information about [UML and Case Tools](#). The UML.DTD file is needed to work with some of the data modeling tools, it is located in your Program Files, ArcGIS directory in the Case Tools>Utilities folder. This file enables the Case Tools to recognize the contents of the xml file and needs to be kept in the same folder together with it. Please note that using Case Tools requires an ArcEditor or ArcInfo license.
